

### **REMARKS**

Applicant acknowledges with appreciation the Examiner's indication that claim 10 would be allowable if rewritten in independent form including all the limitations of the base claim and any intervening claims. In response to this indication, claim 10 has been amended to include the limitations of claim 1. It is believed that claim 10 is now in condition for allowance.

The title of the application stands objected to for lacking descriptiveness. It is not clear to Applicant how the title is not descriptive since the claims of the application are directed to a liquid crystal display module, which is also the title of the application. Accordingly, reconsideration of this objection is requested. Applicant welcomes the Examiner's suggestion to overcome this objection.

Claims 1-7, 9 and 11-13 stand rejected under 35 U.S.C. § 102(b) for anticipation by U.S. Patent Document 2003/0043314 to Lee et al. Claim 8 stands rejected under 35 U.S.C. § 103(a) for obviousness from the teachings of the Lee et al. document in view of U.S. Patent Document 6,002,582 to Yeager et al. In response to the rejection thereof, claim 13 has been amended as shown.

In the rejection of claim 1, the Examiner equates elements 127 and 128 in the Lee et al. document with the indentations 29 shown in Figs. 5 and 6 of the present application. However, paragraph 80 and the corresponding figures of the Lee et al. document clearly describe and show that reference numbers 127 and 128 are holes, not indentations of the type shown in Figs. 5 and 6 of the present application that include no lower edge. Holes 127 and 128 are shown clearly in the view of top chassis 100 shown in Fig. 1.

Similarly, in the rejection of claim 1, the Examiner equates reference numbers 878 and 879 of the Lee et al. document with blocking elements 27 shown in Figs. 5 and 6 of the present application having positions corresponding to those of corresponding indentations 29 for preventing the bottom surface of the second frame from being pressed over the bottom surface of the first frame. However, paragraph 80 and the corresponding figures of the Lee et al. document disclose that reference numbers 878 and 879 are protuberances that are designed to engage holes 127 and 128. Protuberances 878 and 879 are shown on the lower mold frame 800 shown in Fig. 1.

Application No. 10/825,462  
Paper Dated: September 19, 2007  
In Reply to USPTO Correspondence of March 19, 2007  
Attorney Docket No. 3744-043931

As can be seen, the Lee et al. document does not disclose the combination of a plurality of indentations and a plurality of blocking elements of the type shown in the present application and claimed in claim 1 of the present application. Accordingly, the Lee et al. document, either individually or in combination with the Yeager et al. document, cannot anticipate claim 1 of the present application, or claims 2-9, 11 and 12 dependent therefrom.

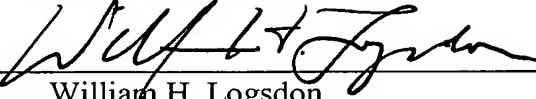

Regarding claim 13, for the reasons discussed above in connection with claim 1, the Lee et al. and Yeager et al. documents, either individually or in combination, cannot anticipate or render obvious claim 13 of the present application.

#### CONCLUSION

Based on the foregoing amendments and remarks, reconsideration of the objection and rejections and allowance of claims 1-13 are requested.

Respectfully submitted,

THE WEBB LAW FIRM
